

Improving the quality of your websites and apps needn't cost the earth.....

The Edge Open Device Lab is a facility that allows you to test your websites or apps on an array of different devices. By doing so, you can improve the quality of your work and be confident that your website or app works as you expect it to across multiple devices.

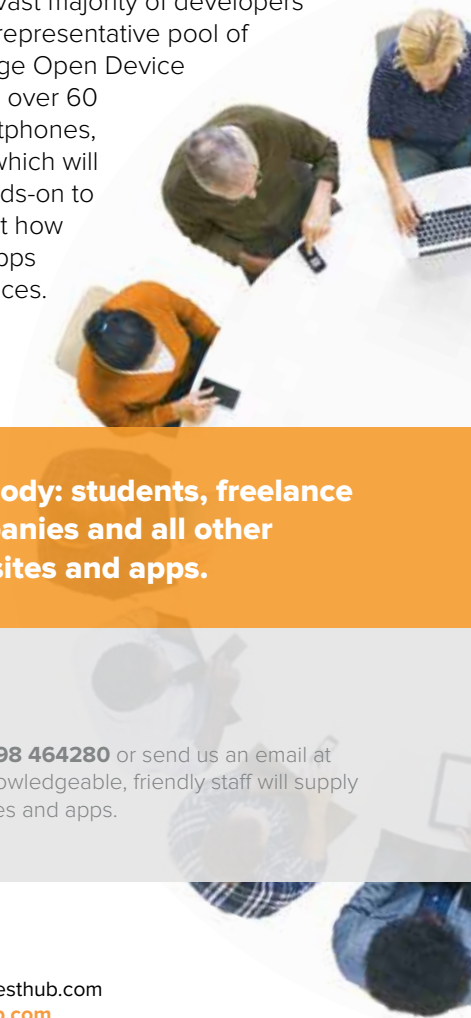

The differing specifications and operating systems as well as varying screen sizes of mobile devices makes it impossible for the vast majority of developers to personally own a representative pool of test devices. The Edge Open Device Lab is equipped with over 60 market leading smartphones, tablets and laptops which will allow you to test hands-on to ensure you know just how your websites and apps respond on real devices.

Open to everyone

Our Open Device Lab is open to everybody: students, freelance developers, in-house teams, tech companies and all other businesses that want to test their websites and apps.

Book a session

So why not come along and visit us? Please call us on **01698 464280** or send us an email at **contact@digitaltesthub.com** to book your slot and our knowledgeable, friendly staff will supply you with the platform to improve the quality of your websites and apps.

What are Open Device Labs?

Edge's Open Device Lab is part of a grass roots community movement. Each lab establishes a shared community pool of internet connected devices for the testing purposes of web and app developers. The result is that Open Device Labs lead to an ultimate improvement of the web and app experience both for developers and for consumers.

Pricing

Our Open Device Lab is open to everybody that wants to use it. It is FREE to use for educational purposes and non-profit making organisations where there is a benefit to the wider community. As soon as you feel you are making money with what you are doing in our device lab, we ask for your support in running the Open Device Lab. This could be a device donation or monetary support from £10 per hour

Why Device Testing?

Testing on mobile emulators or using remote testing tools simply doesn't compare to getting hands-on with a device in the same way your customers and users will. To be confident in your website or app you have to test on real devices. You only have to look at the statistics to see the potential impact of a website or app not working on a specific device group:

- 50% of the average global mobile web users now use mobile as either their primary or exclusive means of going online (InMobi)
- There are over 1.2 billion people accessing the web from their mobile devices (Trinity Digital Marketing)
- Global mobile traffic now accounts for 15% of all internet traffic (Internet Trends, KPCB)
- 30% of mobile shopper abandon a transaction if the experience is not optimised for mobile (MoPowered)

The Edge Open Device Lab is based at our head office at the Strathclyde Business Park near Glasgow.
